

## Thy Study of Electroluminescent Polymers and Application in Wpled

By Chung-Feng Liao

VDM Verlag. Paperback. Condition: New. 100 pages. Dimensions: 8.7in. x 5.9in. x 0.2in. Polymer light-emitting diodes (PLEDs) based on fluorescent and phosphorescent electroluminescence (EL) have attracted great attention currently, and been extensively investigated. In this study, a series of copolyfluorenes (PFG1PFG4) containing distyrylbenzene derivatives (GM) were synthesized by Suzuki coupling reaction. The electroluminescent (EL) spectra of the PFG copolymers are very different from photoluminescent (PL) spectra. The green emission (520 nm) in EL spectra are much stranger than those in PL spectra, which can be partially attributed to energy transfer from fluorene segments to GM segments. The performance of EL devices ITOPEDOT: PSSpolymerCa(50 nm)Al(100 nm) were improved with an increase in GM content in polymer chain. The PFG4 devices have the best performance (6794 cdm<sup>2</sup>, 1.69 cdA), and the PFG1 and PFG2 exhibited the similar intensity of blue and green emission. Therefore, we fabricated the WPLED by blending PFG2 with a red iridium complex. By carefully controlling the amount of the iridium complex, the WPLED device was achieved with the brightness and CIE coordinate were 4116 cdm<sup>2</sup> and (0.31, 0.28), respectively. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.

### Reviews

*These kinds of publication is the greatest pdf available. Better then never, though i am quite late in start reading this one. Once you begin to read the book, it is extremely difficult to leave it before concluding.*

-- Lorena Streich

*It becomes an awesome pdf that I have actually read through. It really is full of knowledge and wisdom You may like how the writer compose this book.*

-- Amanda Gleichner
